

# Package ‘qrcode’

July 22, 2025

**Type** Package

**Title** Generate QRcodes with R

**Version** 0.3.0

**Description** Create static QR codes in R. The content of the QR code is exactly what the user defines. We don't add a redirect URL, making it impossible for us to track the usage of the QR code. This allows to generate fast, free to use and privacy friendly QR codes.

**License** GPL-3

**URL** <https://thierryo.github.io/qrcode/>,  
<https://github.com/Thierry0/qrcode>,  
<https://doi.org/10.5281/zenodo.5040088>

**BugReports** <https://github.com/Thierry0/qrcode/issues>

**Depends** R (>= 4.1.0)

**Imports** assertthat, stats, utils

**Suggests** httr, jpeg, knitr, opencv, png, rsvg, testthat (>= 3.0.0)

**Config/checklist/keywords** two-dimensional barcode; matrix barcode

**Config/testthat/edition** 3

**Encoding** UTF-8

**Language** en-GB

**RoxygenNote** 7.3.2

**NeedsCompilation** no

**Author** Thierry Onkelinx [aut, cre] (Author of the reimplemented functions,  
ORCID: <<https://orcid.org/0000-0001-8804-4216>>),  
Victor Teh [aut] (Original author)

**Maintainer** Thierry Onkelinx <qrcode@muscardinus.be>

**Repository** CRAN

**Date/Publication** 2024-09-29 16:40:02 UTC

add_logo	<i>Add a logo to a QR code</i>
----------	--------------------------------

---

### Description

First generate a qr\_code with a higher ecl level. Then add the logo. The maximum area of logo depends on the difference in ecl level between the version with and without logo. The size of the logo is further restricted by its image ratio. We shrink very wide or tall logos to make sure it still fits on the logo.

### Usage

```
add_logo(
  code,
  logo,
  ecl = c("L", "M", "Q", "H"),
  hjust = c("c", "l", "r"),
  vjust = c("c", "b", "t")
)
```

### Arguments

code	A qr_code object
logo	the path to a logo image file. Must be either png, svg or jpeg format.

ec1	the required error correction level for the QR code after overlaying the logo. Must be lower than the ec1 in the code. Defaults to "L". The difference between the ec1 set here and the ec1 in code determines the maximum area of the logo. For the largest logo, generate code with ec1 = "H" and add the logo with ec1 = "L".
hjust	Horizontal position of the logo. The default of "c" indicates the centre of the QR code. Use "r" to align the right side of the logo with the right side of the QR code. Use "l" to align the left side of the logo with the right side of the two vertical finder patterns.
vjust	Vertical position of the logo. The default of "c" indicates the centre of the QR code.. Use "b" to align the bottom of the logo with the bottom of the QR code. Use "t" to align the top of the logo with the bottom side of the two horizontal finder patterns.

---

as.character.bits      *Convert a bits object into a character string*

---

## Description

Convert a bits object into a character string

## Usage

```
## S3 method for class 'bits'
as.character(x, ...)
```

## Arguments

x	the bits object
...	currently ignore

## Author(s)

Thierry Onkelinx

## See Also

Other bits: [bits\(\)](#), [bits2int\(\)](#), [c.bits\(\)](#), [print.bits\(\)](#)

## Examples

```
z <- bits(c(FALSE, TRUE, TRUE, FALSE))
z
as.character(z)
```

---

`bits` *Create a bits object*

---

**Description**

Converts a logical vector into a bits object. This remains a logical vector. The main difference is that is printed as a 0 and 1 bit string rather than a FALSE and TRUE vector

**Usage**

```
bits(x)
```

**Arguments**

`x` a logical vector

**Author(s)**

Thierry Onkelinx

**See Also**

Other bits: [as.character.bits\(\)](#), [bits2int\(\)](#), [c.bits\(\)](#), [print.bits\(\)](#)

**Examples**

```
z <- bits(c(FALSE, TRUE))
z
str(z)
```

---

`bits2int` *Convert a bits object to an integer and vice versa*

---

**Description**

Convert a bits object to an integer and vice versa

**Usage**

```
bits2int(x)
```

```
int2bits(i, n_bit = 16)
```

**Arguments**

x                    the bits object  
i                    the integer  
n\_bit                the number of bits

**Author(s)**

Thierry Onkelinx

**See Also**

Other bits: [as.character.bits\(\)](#), [bits\(\)](#), [c.bits\(\)](#), [print.bits\(\)](#)

**Examples**

```
z <- bits(c(FALSE, TRUE, TRUE, FALSE))  
z  
y <- bits2int(z)  
y  
int2bits(y)  
int2bits(y, 4)
```

---

c.bits

*Combine bits*

---

**Description**

The result inherits arguments from the first element.

**Usage**

```
## S3 method for class 'bits'  
c(...)
```

**Arguments**

...                    the bits to concatenate

**Author(s)**

Thierry Onkelinx

**See Also**

Other bits: [as.character.bits\(\)](#), [bits\(\)](#), [bits2int\(\)](#), [print.bits\(\)](#)

## Examples

```
z <- bits(c(FALSE, TRUE))
z
c(z, z, rev(z))
```

---

coordinates

*Extract coordinates from a QR code object.*

---

## Description

Selects the dark elements from the `qr_code` object and returns their coordinates. This can be useful when you want to create a QR code with a custom style.

## Usage

```
coordinates(x)
```

## Arguments

`x` the `qr_code` object.

## Value

A data.frame with the column and row number of the dark elements.

## Author(s)

Thierry Onkelinx

## See Also

Other qr: [generate\\_svg\(\)](#), [plot.qr\\_code\(\)](#), [print.qr\\_code\(\)](#), [qr\\_code\(\)](#), [qr\\_event\(\)](#), [qr\\_location\(\)](#), [qr\\_sepa\(\)](#), [qr\\_wifi\(\)](#)

## Examples

```
x <- qr_code("test")
plot(x)
head(coordinates(x))
plot(coordinates(x), pch = 19, cex = 2, asp = 1)
```

---

generate_svg	<i>Generate the QR code as an svg file</i>
--------------	--

---

## Description

Create the QR code using `qr_code()` and save it as an svg file.

## Usage

```
generate_svg(  
  qrcode,  
  filename,  
  size = 300,  
  foreground = "black",  
  background = "white",  
  show = interactive(),  
  ...  
)  
  
## Default S3 method:  
generate_svg(  
  qrcode,  
  filename,  
  size = 300,  
  foreground = "black",  
  background = "white",  
  show = interactive(),  
  ...  
)  
  
## S3 method for class 'qr_code'  
generate_svg(  
  qrcode,  
  filename,  
  size = 300,  
  foreground = "black",  
  background = "white",  
  show = interactive(),  
  ...  
)  
  
## S3 method for class 'qr_wifi'  
generate_svg(  
  qrcode,  
  filename,  
  size = 300,  
  foreground = "black",
```

```

    background = "white",
    show = interactive(),
    ...,
    fontsize = 15
)

## S3 method for class 'qr_logo'
generate_svg(
  qrcode,
  filename,
  size = 300,
  foreground = "black",
  background = "white",
  show = interactive(),
  ...
)

```

### Arguments

qrcode	a <code>qr_code</code> object as generated by <code>qr_code</code> .
filename	Where to store the QR code as svg file. Silently overwrites existing files. Tries to create the path, when it doesn't exist.
size	width of the svg file in pixels. Defaults to 300.
foreground	Stroke and fill colour for the foreground. Use a valid <b>CSS colour</b> . Defaults to "black".
background	Fill colour for the background. Use a valid <b>CSS colour</b> . Defaults to "white".
show	Open the file after creating it. Defaults to TRUE on <code>interactive()</code> sessions, otherwise FALSE.
...	Currently ignored.
fontsize	The size of the font in pixels.

### Value

invisible NULL

### Author(s)

Thierry Onkelinx

### See Also

Other qr: `coordinates()`, `plot.qr_code()`, `print.qr_code()`, `qr_code()`, `qr_event()`, `qr_location()`, `qr_sepa()`, `qr_wifi()`

## Examples

```
code <- qr_code("HELLO WORLD")
generate_svg(
  qrcode = code, filename = tempfile(fileext = ".svg"), show = FALSE
)
```

---

plot.qr_code	<i>Plot the QR code This function plots to QR code to the open device.</i>
--------------	--

---

## Description

Plot the QR code This function plots to QR code to the open device.

## Usage

```
## S3 method for class 'qr_code'
plot(x, col = c("white", "black"), y, ...)

## S3 method for class 'qr_logo'
plot(x, col = c("white", "black"), y, ...)
```

## Arguments

x	the qr_code object
col	Define the colours. The first element refers to FALSE and the second TRUE. Defaults to c("white", "black").
y	currently ignored
...	currently ignored

## Author(s)

Thierry Onkelinx

## See Also

[opencv::ocv\\_qr\\_detect\(\)](#) for reading QR codes.

Other qr: [coordinates\(\)](#), [generate\\_svg\(\)](#), [print.qr\\_code\(\)](#), [qr\\_code\(\)](#), [qr\\_event\(\)](#), [qr\\_location\(\)](#), [qr\\_sepa\(\)](#), [qr\\_wifi\(\)](#)

Other qr: [coordinates\(\)](#), [generate\\_svg\(\)](#), [print.qr\\_code\(\)](#), [qr\\_code\(\)](#), [qr\\_event\(\)](#), [qr\\_location\(\)](#), [qr\\_sepa\(\)](#), [qr\\_wifi\(\)](#)

## Examples

```
qr <- qr_code("HELLO WORLD")
plot(qr)

# Test the QR code with the opencv package
if (requireNamespace("opencv")) {
  png("test.png")
  plot(qr)
  dev.off()
  opencv::ocv_qr_detect(opencv::ocv_read('test.png'))
  unlink("test.png")
}
```

---

print.bits

*Print a bits vector Display the logical vector as a bit string where FALSE is shown as 0 and TRUE as 1.*

---

## Description

Print a bits vector Display the logical vector as a bit string where FALSE is shown as 0 and TRUE as 1.

## Usage

```
## S3 method for class 'bits'
print(x, ...)
```

## Arguments

x	the object to print
...	currently ignored

## Author(s)

Thierry Onkelinx

## See Also

Other bits: [as.character.bits\(\)](#), [bits\(\)](#), [bits2int\(\)](#), [c.bits\(\)](#)

## Examples

```
z <- bits(c(FALSE, TRUE))
print(z)
```

---

print.qr_code	<i>Print the qr_code object</i>
---------------	---------------------------------

---

**Description**

Please use `plot(x)` for a better quality image

**Usage**

```
## S3 method for class 'qr_code'  
print(x, ...)
```

**Arguments**

x	the qr_code object
...	currently ignored

**Author(s)**

Thierry Onkelinx

**See Also**

Other qr: [coordinates\(\)](#), [generate\\_svg\(\)](#), [plot.qr\\_code\(\)](#), [qr\\_code\(\)](#), [qr\\_event\(\)](#), [qr\\_location\(\)](#), [qr\\_sepa\(\)](#), [qr\\_wifi\(\)](#)

**Examples**

```
qr_code("HELLO WORLD")
```

---

qr_code	<i>Generate the QR code</i>
---------	-----------------------------

---

**Description**

A **QR code** is a two-dimensional barcode developed by the Denso Wave company.

**Usage**

```
qr_code(x, ecl = c("L", "M", "Q", "H"))
```

**Arguments**

x	the input string
ecl	the required error correction level. Available options are "L" (7%), "M" (15%), "Q" (25%) and "H" (30%). Defaults to "L".

**Value**

The QR code as a logical matrix with "qr\_code" class.

**Author(s)**

Thierry Onkelinx

**See Also**

Other qr: [coordinates\(\)](#), [generate\\_svg\(\)](#), [plot.qr\\_code\(\)](#), [print.qr\\_code\(\)](#), [qr\\_event\(\)](#), [qr\\_location\(\)](#), [qr\\_sepa\(\)](#), [qr\\_wifi\(\)](#)

**Examples**

```
qr_code("https://www.r-project.org")
qr <- qr_code("https://cran.r-project.org/package=qr", ecl = "M")
qr
plot(qr)
# the qr_code object is a logical matrix
str(qr)
qr[1:10, 1:10]
```

---

qr\_event

*Generate a QR code for an event*

---

**Description**

Generate a QR code for an event

**Usage**

```
qr_event(start, end, title, ..., ecl = c("L", "M", "Q", "H"))
```

**Arguments**

start	the required start time as POSIXct.
end	the required end time as POSIXct.
title	the required title of the event.
...	optional arguments as defined in the details.
ecl	the required error correction level. Available options are "L" (7%), "M" (15%), "Q" (25%) and "H" (30%). Defaults to "L".

## Details

Optional arguments. Other arguments are silently ignored.

- description
- location
- organiser
- url

---

qr_location	<i>Create a QR code for a location</i>
-------------	--

---

## Description

Create a QR code for a location

## Usage

```
qr_location(latitude, longitude, ecl = c("L", "M", "Q", "H"))
```

## Arguments

latitude	the latitude of the location.
longitude	the longitude of the location.
ecl	the required error correction level. Available options are "L" (7%), "M" (15%), "Q" (25%) and "H" (30%). Defaults to "L".

## See Also

Other qr: [coordinates\(\)](#), [generate\\_svg\(\)](#), [plot.qr\\_code\(\)](#), [print.qr\\_code\(\)](#), [qr\\_code\(\)](#), [qr\\_event\(\)](#), [qr\\_sepa\(\)](#), [qr\\_wifi\(\)](#)

## Examples

```
qr_location(50.8449861, 4.3499932) |>  
plot()
```

---

qr_sepa	<i>Generate a QR code for a SEPA payment</i>
---------	--

---

## Description

Generate a QR code for a SEPA payment

## Usage

```
qr_sepa(  
  iban,  
  beneficiary,  
  amount,  
  unstructured_reference = "",  
  bic = "",  
  purpose = "",  
  structured_reference = ""  
)
```

## Arguments

iban	the IBAN of the beneficiary.
beneficiary	the name of the beneficiary.
amount	the amount to transfer. Must be in EUR.
unstructured_reference	the unstructured reference. The unstructured reference is a string of maximum 140 characters.
bic	the BIC of the beneficiary.
purpose	the purpose of the payment.
structured_reference	the structured reference.

## See Also

Other qr: [coordinates\(\)](#), [generate\\_svg\(\)](#), [plot\\_qr\\_code\(\)](#), [print\\_qr\\_code\(\)](#), [qr\\_code\(\)](#), [qr\\_event\(\)](#), [qr\\_location\(\)](#), [qr\\_wifi\(\)](#)

## Examples

```
qr_sepa(  
  iban = "GB33BUKB20201555555555", beneficiary = "John Doe",  
  amount = 100, unstructured_reference = "Test payment"  
) |>  
  plot()
```

---

qr\_vcard                      *Create a QR code for a vCard*

---

### Description

Create a QR code for a vCard

### Usage

```
qr_vcard(
  given,
  family,
  address,
  email,
  telephone,
  organisation,
  job_title,
  url,
  gender,
  logo,
  photo,
  middle = character(),
  prefix = character(),
  suffix = character(),
  ecl = c("L", "M", "Q", "H"),
  ...
)
```

### Arguments

given	The given name.
family	The family name.
address	In case of a single address, a named character vector with the following elements: <code>street_nr</code> , <code>city</code> , <code>region</code> , <code>postal_code</code> and <code>country</code> . In case of multiple addresses, a named list of named character vectors. The names of the list are used as the type of the address.
email	Optionally one or more email addresses. The names of the vector are used as the type of the email address.
telephone	Optionally one of more telephone numbers. The names of the vector are used as the type of the telephone number.
organisation	Optionally the name of your organisation and team within the organisation.
job_title	Optionally the job title of the person.
url	Optionally one or more URLs. The names of the vector are used as the type of the URL.
gender	Optionally a string describing the gender of the person.

logo	Optionally a URL to a logo.
photo	Optionally a URL to a photo.
middle	Optionally one or more middle names.
prefix	Optionally one or more prefixes.
suffix	Optionally one or more suffixes.
ecl	the required error correction level. Available options are "L" (7%), "M" (15%), "Q" (25%) and "H" (30%). Defaults to "L".
...	Additional arguments are silently ignored.

---

qr\_wifi

---

*Generate QR code with wifi login information*

---

### Description

Generate QR code with wifi login information

### Usage

```
qr_wifi(
  ssid,
  encryption = c("WPA", "WEP", ""),
  key = "",
  hidden = FALSE,
  ecl = c("L", "M", "Q", "H")
)
```

### Arguments

ssid	The SSID of the network.
encryption	The encryption standard. Options are "WPA", "WEP" and "". The latter implies no encryption. Defaults to "WPA".
key	The key for the encryption.
hidden	Use FALSE for a visible SSID. Use TRUE for a hidden SSID. Defaults to FALSE.
ecl	the required error correction level. Available options are "L" (7%), "M" (15%), "Q" (25%) and "H" (30%). Defaults to "L".
