## Abstract

This is a sample document illustrating the use of the `glossaries` package. The functions here have been taken from “Tables of Integrals, Series, and Products” by I.S. Gradshteyn and I.M. Ryzhik.

The glossary lists both page numbers and equation numbers. Since the majority of the entries use the equation number, `counter=equation` was used as a package option. Note that this example will only work where the page number and equation number compositor is the same. So it won’t work if, say, the page numbers are of the form 2-4 and the equation numbers are of the form 4.6. As most of the glossary entries should have an italic format, it is easiest to set the default format to italic.

## Gamma Functions

The **gamma function** is defined as

$$\Gamma(z) = \int_0^\infty e^{-t} t^{z-1} dt \quad (1.1)$$

$$\Gamma(x+1) = x\Gamma(x) \quad (1.2)$$

$$\gamma(\alpha, x) = \int_0^x e^{-t} t^{\alpha-1} dt \quad (1.3)$$

$$\Gamma(\alpha, x) = \int_x^\infty e^{-t} t^{\alpha-1} dt \quad (1.4)$$

$$\Gamma(\alpha) = \Gamma(\alpha, x) + \gamma(\alpha, x) \quad (1.5)$$

$$\psi(x) = \frac{d}{dx} \ln \Gamma(x) \quad (1.6)$$

# Chapter 2

## Error Functions

The **error function** is defined as:

$$\text{erf}(x) = \frac{2}{\sqrt{\pi}} \int_0^x e^{-t^2} dt \quad (2.1)$$

$$\text{erfc}(x) = 1 - \text{erf}(x) \quad (2.2)$$
